# DIRECTIONS TO KILL FLIES

## With Fly Flakes

**FLY FLAKES** are small solid flakes that are simply scattered by hand on floors, the ground, on litter or on manure in areas where flies congregate or breed.

**RATES: ADULT (Winged Flies) Only** — Use 3 to 4 Oz. per 100 Sq. Ft. **Maggots and Adults** — Use 1 Lb. to 1 ½ Lbs. per 100 Sq. Ft.

**WHERE TO USE:** Apply where flies congregate or breed, such as **Dairy Barns, Poultry Houses, Stables, Manure Piles, Garbage Cans and Dumps, Feed-Rooms, Processing Plants, Stores, Commercial Buildings, Picnic Areas, and Porches.**

**WHERE NOT TO USE:** Do not use FLY FLAKES inside homes or where milk is processed or stored or where poultry can feed on the flakes. Finished floors may be scratched if FLY FLAKES are trodden under foot. To avoid skin contact when applying FLY FLAKES use a rubber glove of the type found in most drug stores.

**DAIRY BARNs** — Scatter on the **Feed-Room Floor** and wherever flies congregate in the milking area, such as the **Feed Cart Aisles**. Leave on the feed-room floor for as many days as the flies continue to die; then sweep the floor and re-apply. **Do not feed the floor sweepings to livestock.**

**POULTRY ON WIRE** — For quickest reduction use FLY FLAKES on damp areas of manure where there are maggots. Use 1 to 1 ½ Lbs. per 100 Sq. Ft. and re-apply every seven days on a spot-treatment basis. Also apply against adult flies at **3 to 4 Oz. per 100 Sq. Ft.** wherever the flies congregate in and around the buildings such as on **manure, walkways, in feed-rooms, and egg-houses**. Repeat against adults as needed, usually every 5 to 10 days.

**POULTRY ON GROUND OR LITTER** — Apply where the poultry cannot feed upon the flakes.

**DOUBLE ACTION** — FLY FLAKES are attractive to and kill adults for at least 3 weeks if the flakes remain dry and within reach of the flies. When moisture contacts the flakes the toxicant enters the moisture and is dispersed in all directions. In this manner the poison contacts maggots and kills them.

## Other Methods

**ADULT FLIES ONLY** — FLY FLAKES are the easiest, simplest, fastest, most effective means of all. However, a bait formula for application with a sprinkler-can to concrete and wooden floors follows:

### Sweet Water Bait

Water	3 Gals.
FASCO Malathion Liquid-50	1 Fl. Oz.
or IDEAL Brand Malathion spray	2 Fl. Oz.
Blackstrap, Syrup or Honey	1 Qt.
or Sugar	2 Lbs.

**Honey-Wettable Malathion Bait.** Where poultry is on litter or on the ground, if there are not enough areas inside the building or pen where FLY FLAKES can be safely used and if additional control is needed, the formula which follows is very effective. This bait may also be used in **dairy barns, caged hen houses, hog pens and in livestock barns**. When made with honey it often kills for three weeks or until eaten away. Apply by smearing onto burlap or by dribbling in a narrow band on hard surfaces.

The formula:

Honey, Blackstrap or Syrup	2 ½ Gals.
FASCO Malathion 25-WP	1 Lb.

Mix and stir thoroughly before use.

**MAGGOTS** — FLY FLAKES are the first product in history that we know of to control both maggots and adults at once. However, some might wish to **spray** for maggot control and use FLY FLAKES against adults and as a "spot treatment" for maggot infestations.

The Spray Formula:

Water	3 Gals.	100 Gals.
FASCO Malathion Liquid-50	8 Fl. Oz.	2 Gals.
or IDEAL Brand Malathion Spray	1 Pt.	

Apply one gallon of spray per each 100 Sq. Ft. against maggots in poultry houses, barns, garbage dumps, and on manure piles.

## HYPONEX

Grows Better Plants Faster  
In SOIL, SAND or WATER

Simply dissolve and water  
all your houseplants, garden  
flowers, vegetables, shrubs or  
lawn. Produces stronger plants,  
more and larger flowers and  
fruit. Excellent for starting  
seedlings, cuttings, transplants.  
Clean, odorless. Won't burn  
foliage or roots if used as  
directed. Contains all nutri-  
tional elements complete and  
balanced—plus vitamin B1—  
Instantly available. Results sure.
